

# QWAPI

The ultimate requisition control module for internal and external systems, providing a management layer that defines API Gateway behavior.

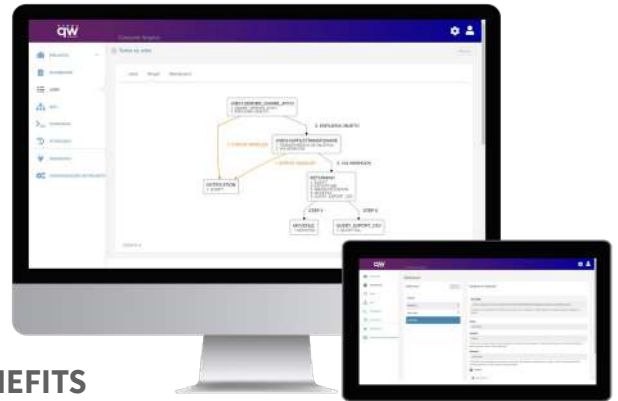

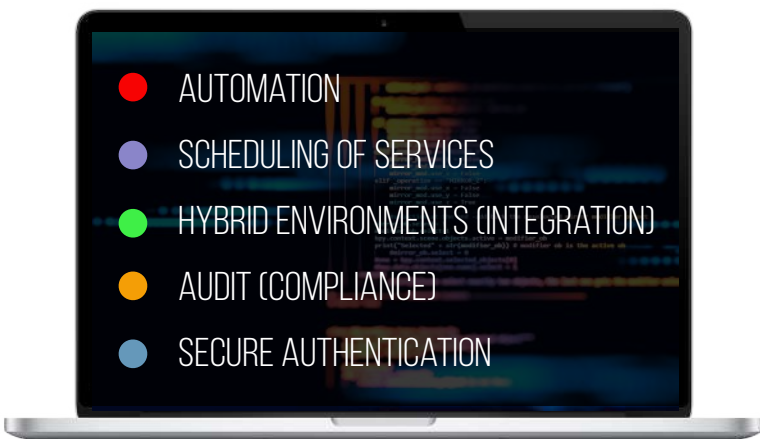

## THE PRODUCT

I'm a module that works in a connected way or independent of the QW Control platform.

I am responsible for efficiently providing, performative form, the requests for the internal systems, called micro-services.

These are my characteristics:

- » Centralization of access to services of an API
- » Access control with the provision of a secure layer of authentication
- » Monitoring traffic arriving at the API through plugins
- » Request and Response Transformation for various purposes.

## BENEFITS

- ➔ Innovation
- ➔ API calls
- ➔ Band control
- ➔ Distributed and mainframe environment
- ➔ Punctual deliveries [delivered on time]
- ➔ Lineup
- ➔ Workflows
- ➔ SLA Management
- ➔ Shorter incidents
- ➔ Less interruptions
- ➔ Monitoring
- ➔ Real-time notifications
- ➔ Single point of control
- ➔ Predictability
- ➔ Cost reduction
- ➔ Visibility
- ➔ Enhanced security [against threats]

Whether in development, operations or lines of business, the QW API is the ultimate solution in centralizing the control of requisitions from your micro-services counter.
