

# QWControl

Orchestrate information flows and ensure integration, execution, and control of processes centrally and in accordance with the most demanding SLA levels established, providing even more relevant results for your business.

## HOW CAN WE TRANSFORM YOUR BUSINESS

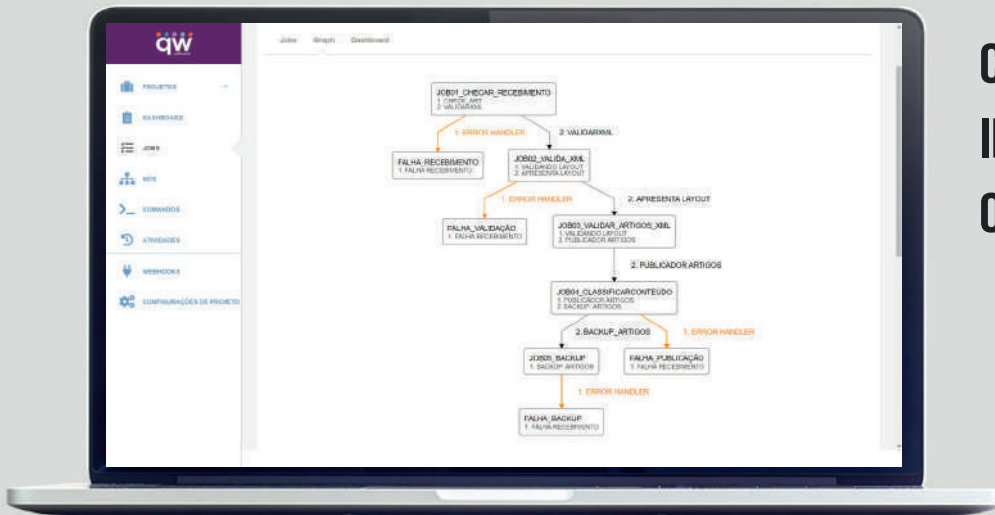

We deliver a solution for managing, tracking, and automating processes and routines across different platforms, providing a single point of real-time control, ensuring that production issues are consistently and effectively detected and resolved.

Additionally, we provide a range of specialized services, whose actions can be parameterized to ensure effective integration between processes on heterogeneous platforms.

## BENEFITS

- » Provides a single point of real-time control through graphical views, enabling management, monitoring, and complex automations across different platforms.
- » Offers real-time alerts and notifications that allow comparing current execution time with statistical information stored in the database.
- » Ensures that production issues will be consistently detected and resolved.
- » Visually presents the flow of jobs for a specific date.
- » Simulates the flow of jobs and dependencies.
- » Offers the use of filtering criteria.
- » Provides the ability to schedule web services as jobs.
- » Allows automatic handling of messages after event resolution.
- » Presents more meaningful alerts messages for problem resolution in the flows.
- » Enables notification to multiple destinations.
- » Facilitates the reduction of granularity in production processes.

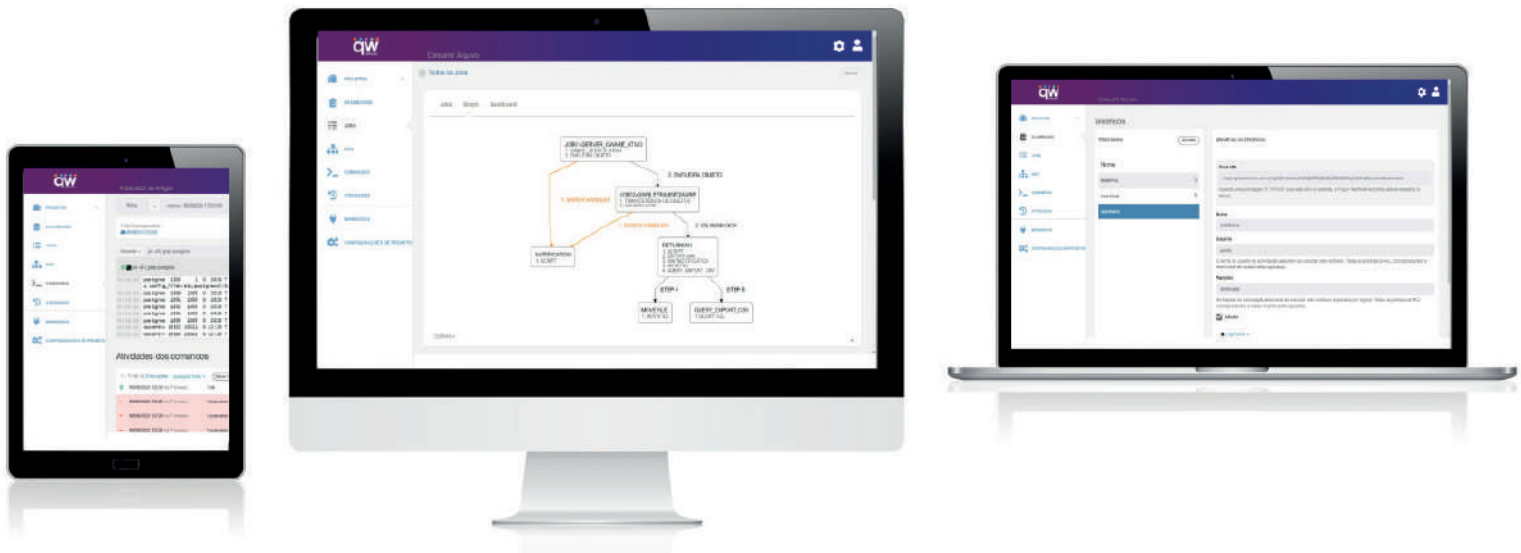

**CONTROL, ANALYZE, AND INTEGRATE EVERYTHING IN ONE SECURE PLACE THROUGH:**

- **ORCHESTRATION**
- **AUTOMATION**

**IMPORTANT DIFFERENTIATORS:**

<b>MODERNITY</b>	<b>VERSATILITY</b>	<b>AUTOMATION</b>	<b>CONTROL</b>	<b>PRODUCTIVITY</b>	<b>GOVERNANCE</b>
Specialized plugins [large library available]	Platform open and adjustable to any need of business	Integration, automation and orchestration of flows from application in environments	Management of Jobs in Single web console	Elimination task manuals and improvement in the SLAs	Audit and Control for Compliance and governance of the Data

QW Control is the operational advantage your company needs, whether in development or in operations or lines of business to orchestrate information flows by connecting to applications or data source and its critical systems, proactively managing SLAs, enabling a effective support for audits, compliance and governance, maintaining stability of operations and with zero downtime.

# QWControl

According to a recent analysis by Gartner for Service Orchestration and Automation Platforms, 42% of respondents with annual revenue above \$1 billion are investing in IT service automation. Another 52% are continuing to invest in this manner.

## HERE YOUR TRUE DIGITAL TRANSFORMATION BEGINS

It is a fact that workload automation, as a strategy, needed a re-reading to deal with the needs of events oriented to business models and cloud infrastructure.

This statement by Gartner [Market Guide 2020 for Service Orchestration and Automation Platforms], is still complemented with the vision that I&O leaders who want to drive customer-focused agility as part of their cloud, big data or DevOps initiatives, inevitably, need to use platforms with service-oriented to orchestration and automation.

**QW Control** delivers a solution for **managing, monitoring** and **automating processes and routines** on different platforms, through a single point of control in real time, which ensures that problems in production are detected and solved in a consistent and effective way.

Among interviewed, when it comes to automation, the ranking pointed out the following concerns: efficiency (75%), risk of migration (50%) and cost reduction (46%).

With this in mind, QW Software, a company with over 30 years in the IT market and committed to excellence, has been helping various companies in this transformation and generation of more added value through the following solutions:

Orchestration, automation, intelligent management, reliability, and security are some of the pillars found within our service platform. And what does our client desire? They seek increased financial gains, reduced downtime, process optimization, better SLA indicators, cost reduction, risk mitigation, elimination of losses, and other benefits that only QW Software and its products can offer.

We can help your organization on this transformation journey that will generate and add even more value to your business.

**QWControl and QWControl [Plug-Ins]**  
Automation and Orchestration of Jobs, plus even more Connectivity with other Services and Platforms

**QWIntegra**  
Systems and Data Integration

**z/QW**  
Automation Solution for Mainframe z/OS

**QWCFP**  
Content and Document Management

**QWFDS**  
File Transfer

**QWVA**  
Smart Management of Virtual Machines [VMs]

# QWControl *[Plug-ins]*

It's almost impossible for a single software to meet every demand, which is why it's vital for solutions to fit specific needs. With plug-ins, QW Control becomes the missing key piece in your organization, allowing you to expand operations to new possibilities.

## THE PRODUCT

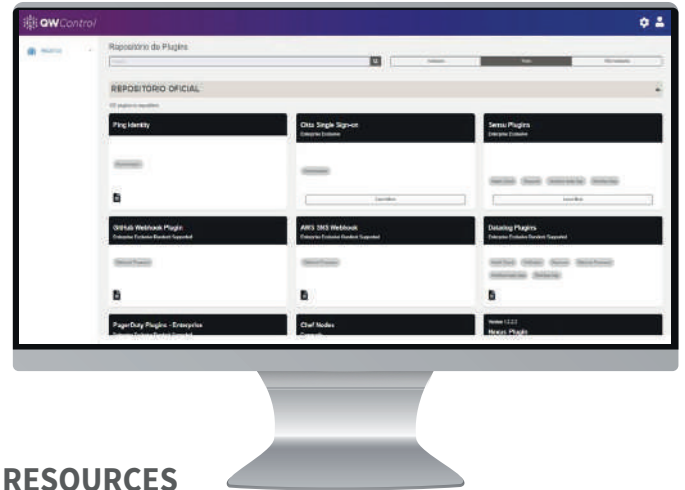

Use plug-ins to increase even more its connectivity to other services and platforms.

## ADVANTAGE

With these easily configurable plugins, you can connect to databases, automate backups, copy backup files, and transfer them to another server. You can also automate commands by creating specific scripts tailored to your business needs.

Additionally, it's possible to enable HTTP, Slack, and other notifiers to receive messages in case of job automation failures.

Feel secure with our plugins in robotic process automation for business operations.

## RESOURCES

- Ansible
- Automation
- AWS
- Azure
- Data Storage
- Docker Container
- File Transfer
- Google Cloud
- Groovy SQL
- HTTP Notifications
- Jenkins
- Kubernetes
- OpenSSH
- Robotização
- Script
- Telegram Notification
- Webhooks

### THE MOST USED PLUGINS:

- DATA STORAGE ●
- OPENSCH ●
- SCRIPT ●

Whether in development, operations or lines of business, plug-ins are the ultimate solution to increase your connectivity with other services and platforms, in a safe, agile and effective way.
